

Type 1

Elastomeric Pads

Elastomeric Pads range from 1/4" to 1" thick, with deflections equal to 15% of the pad thickness. Load ranges are from 10 to 120 psi. Hardness ranges from 30 to 80 Shore A Durometer. Standard pad sizes shall range from 2" x 2" thru 18" x 36". Custom sizes shall be available. For stacked pads with steel plates, multiply deflection by the number of pads in the stack.

Elastomeric Pads are compounded from Neoprene, Durulene™ or special oil resistant compounds and are color coded or marked by load range.
